Nixon Nova | Live Trading Results

Exchange-export summary • Not independently audited

Export window: 22 September–6 November 2026

Starting capital: approximately US$600 per venue; approximately US$1,200 combined.

Strategy context

My approach: personal crypto trading across CEX/DEX, combining both complementary strategies below rather than using them as alternatives.

Funding-rate delta-neutral. Lower-risk / lower-return focus: long spot and short leveraged futures. A bot runs hourly and rebalances approximately 5 minutes before funding settlement.

Bearish reversal momentum. Higher-risk / higher-return focus: scan weak, hype-driven assets (new listings, meme coins and low-market-cap tokens) after approximately 20–40% pumps, then enter shorts when the move appears unsustainable.

Self-built automation. Monitoring and execution run on TypeScript/Python bots, using WebSockets and fee-aware logic.

Risk management. Cap about 3–4% of capital per asset, leverage at most 3×, and at most two assets per venue.

Exports substantiate fills and reported Closed PnL (including short opens and closes), not entry rationale, matched hedge legs, or funding earnings.

Exported results

Venue	Export period 2026	Fills	Closed PnL	Reported fees	Closed PnL / approx. starting capital
TxFlow	1 Oct–6 Nov	83	+137.49	1.16	~22.9%
Lighter	22 Sep–5 Nov	112	+131.33	0.05	~21.9%
Combined	**22 Sep–6 Nov**	**195**	**+268.82**	**1.22**	**~22.4%**

Amounts retain export units: TxFlow labels USDC; Lighter unlabeled. Combined figures are arithmetic sums, not confirmed USD equivalents.

Methodology & limitations

Calculation. Closed PnL summed from the CSV rows (Lighter "–" = none). Fees shown separately, not re-deducted without confirming exchange treatment; figures rounded after aggregation.

Capital comparison. Ratios use my approximate starting capital of US$600 per venue / US$1,200 combined (no verified FX). Indicative only—not account-equity returns; unreported funding and unrealized PnL excluded.

Scope & risk. Venue windows differ; short sample, no annualization. Lighter includes one liquidation-labelled close (kept in totals). CSVs alone do not prove ownership or complete performance.

Verification

Redacted exchange CSVs are available on request.
